

Expanding the Evidence Base for Personalized Learning through a Multi-tiered System of Support (MTSS) Program

Dr. Eva Dundas
Chief Learning Officer
BRANCHING MINDS

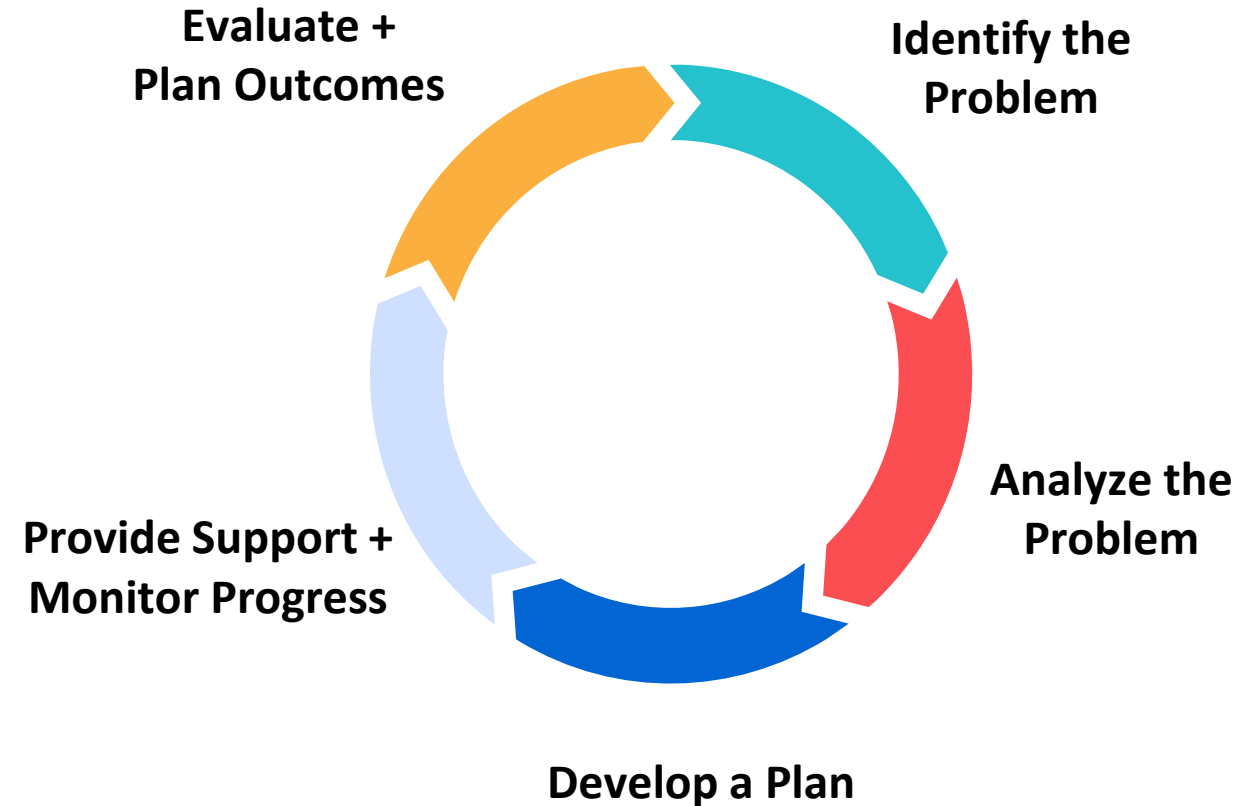

What is MTSS?

- ❑ MTSS is a system-wide approach to provide to provide instruction and intervention at varying levels of intensity based on individual student needs.
 - ❑ *A layered 3 - tier model*
 - ❑ Holistic approach supporting academics, behavioral, and social-emotional needs
 - ❑ Data driven, problem solving practice

MTSS Framework

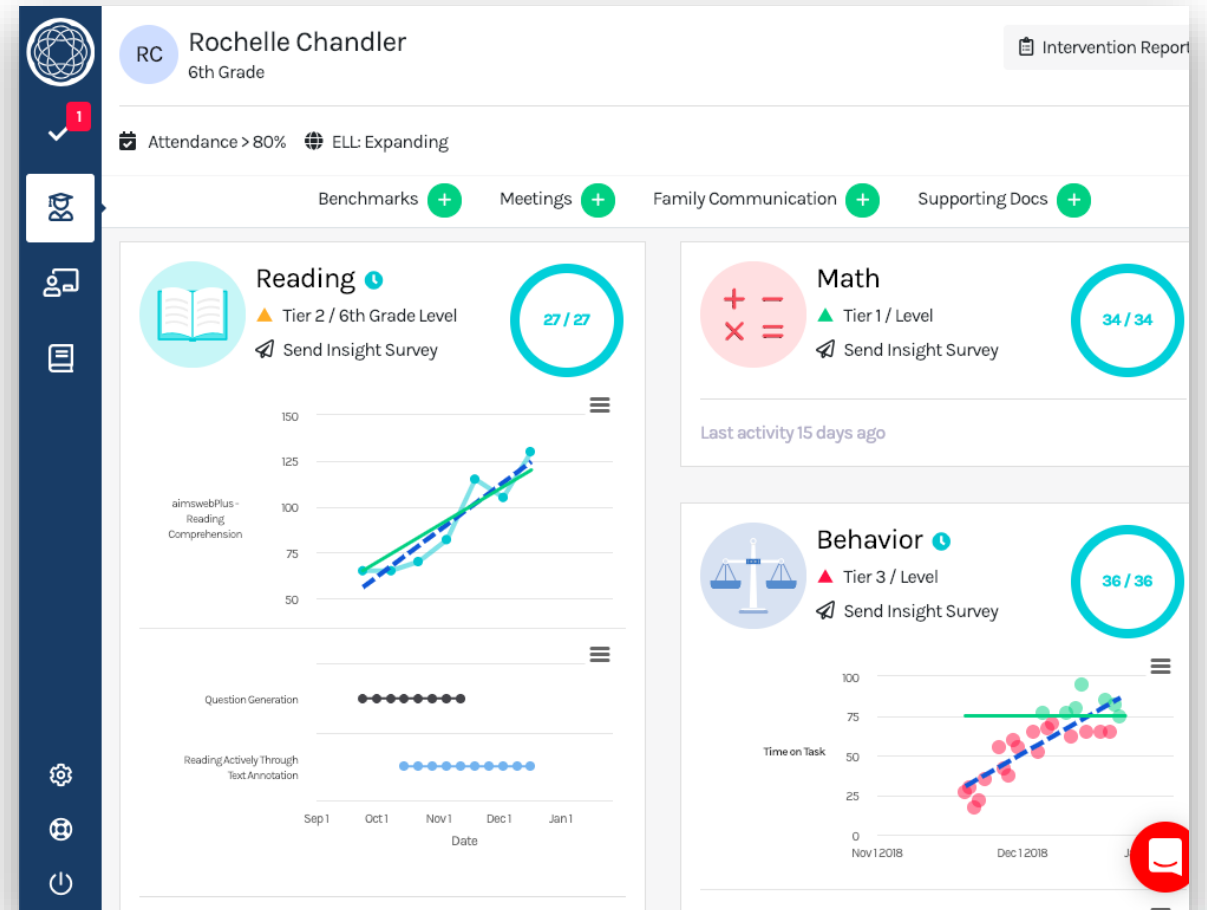

- ❑ Evidence-based core instruction
- ❑ Screening for at-risk students
- ❑ Support plans based on level of student need
- ❑ Continual monitoring of progress
- ❑ Adjustment of plan based on student response and need

Branching Minds Web Application

➤ Streamline and scaffold MTSS practice

- ❑ Use data to ID who needs support
- ❑ Find evidence-based interventions
- ❑ Create academic/behavior/sel plans guided by best practices
- ❑ Monitor implementation and progress
- ❑ Streamline communication across colleagues and families

Branching Minds Web Application

- **Allows us to collect a rich data set on student plans within a MTSS model**
- ❑ Normed assessment data, student demographics, support plan details
- ❑ Data from 16 districts across 6 states, ranging in locale and poverty level
- ❑ 300,000 students with pre- and post-test assessment data (NWEA MAP given approximately 3.5 months apart)
- ❑ 58,600 students had a learning plan for a consistent 3 weeks between assessment periods

Branching Minds Web Application

➤ Questions we sought to examine

- Are we seeing a positive impact of learning plans on student academic achievement?
 - Yes (correlational data)
- Are we seeing equitable student achievement?
 - Yes, equivalent rates of growth across demographics
- Are we seeing equitable implementation of plans?
 - No, minority students are less likely to receive a plan
- Is there a difference in student achievement for plans with online-adaptive programs vs student- and teacher-lead supports/strategies?
 - No, equivalent rates of growth between adaptive PL and student/teacher strate

What we're seeing on BrM

- **Students with learning plans are showing growth**
